Chapter 2

Cited references

Source papers for rhythmic activity of OT neurons in organotypic cultures.

The present review is based mainly on the following series of papers published by the authors and colleagues, including detailed description of methods and discussion of results.

Essential reading on the electrophysiology of the milk ejection reflex

The following two papers by Lincoln and Wakerley (1974; 1975) and the paper by Wakerley and Lincoln (1973) remain models of comprehensive, detailed and nuanced physiological investigation, which have set a firm ground for all subsequent studies.
