Nutrition and Immune and Inflammatory Systems
Bruce R Bistrian and Robert F Grimble

Essay titles

1. Describe the role of various naturally occurring or processed dietary oils containing various amounts of saturated fats, trans fats, oleic acid, linoleic acid, alpha linolenic acid, eicosapentaneoic acid, and docosahexaenoic acid in the dietary modulation of the systemic inflammatory response.

2. Discuss the comparative risks and benefits of enteral and parenteral feeding.

3. Describe why hyperglycaemia is a common consequence of the systemic inflammatory response.
